

CLAIMS

1. A wick for a dispenser for volatile liquid, comprising:
a body defining an opening in which the opening is adapted to receive a member associated with the dispenser.
- 5 2. The wick of claim 1 wherein the opening is positioned in a top of the wick.
3. The wick of claim 1 wherein the opening is positioned in a side of the wick.
4. The wick of claim 1 wherein a shape of the opening is congruent with a
10 shape of the member.
5. The wick of claim 1 wherein a size of the opening is of a dimension larger than a size of the member.
6. The wick of claim 1 wherein the dispenser includes a fan in which the member is affixed to the dispenser in which the body is aligned with the fan with the
15 member received in the opening.
7. The wick of claim 1 wherein the body is elongate and has a length in which the member engages the opening in a direction generally along the length of the body.
8. The wick of claim 1 wherein the body is elongate and has a length in
20 which the member engages the opening in a direction generally transverse to the length of the body
9. The wick of claim 1 including a housing defining another opening adapted to receive a wick through the other opening and into an interior of the housing in which the opening has a dimension H; and in which the member has a dimension P
25 in which P is less than H.
10. The wick of claim 9 wherein P is a width of the member.

11. The wick of claim 9 wherein the member is affixed to an interior surface of the housing opposite the other opening defined by the housing.

12. The wick of claim 11 wherein the member extends from the interior surface toward the other opening defined by the housing.

5 13. The wick of claim 12 wherein the member extends from the interior surface of the housing to proximate the other opening defined by the housing.

14. The wick of claim 11 wherein the member extends in a direction generally transverse to a direction of insertion of the wick into the other opening of the housing.

10 15. The wick of claim 1 wherein a perimeter of a cross section of the member taken generally transverse to a length of the member has a simple geometric shape.

16. The wick of claim 1 wherein, the wick operates at ambient room temperature.

15
